

1. INTRODUCTION

Welcome to the TrainTrip Estimator program! This program is designed to help you estimate the fare for your train journey, considering various train types and stations. This manual will guide you through the installation, usage, and features of the program.

The primary goal of the TrainTrip Estimator is to empower travelers by offering a reliable and straightforward tool to estimate their train fares accurately. The program achieves this goal through a well-structured and interactive interface that guides users through the following key functionalities:

2. INSTALLATION

2.1 Installation from CD

- Insert the TrainTrip Estimator CD into your computer's CD/DVD drive.
- Open the CD drive using File Explorer (Windows) or Finder (Mac).
- Locate the TrainTrip Estimator folder.
- Run the program executable file (e.g., TrainTripEstimator.exe for Windows or TrainTripEstimator for Mac) to launch the program.

4. PROGRAM OPTIONS

4.1 Proceed to Another Station.

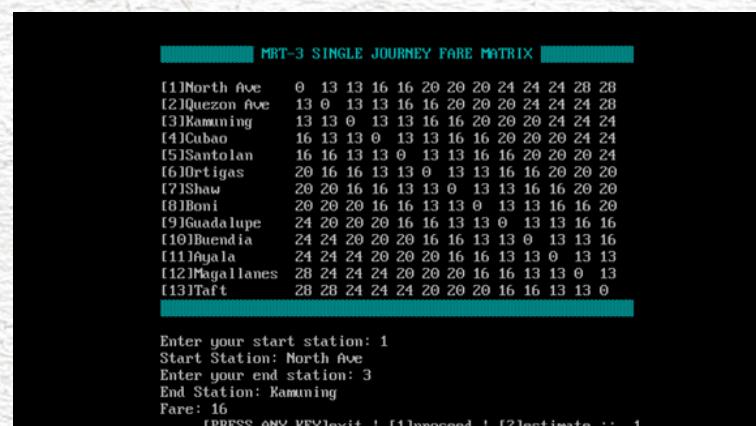

If you wish to continue your journey and estimate the fare for another station, the program will guide you through the process.

4.2 Exit Program

If you want to exit the program, select the corresponding option when prompted.

4.3 Estimate Fare for Entire Trip

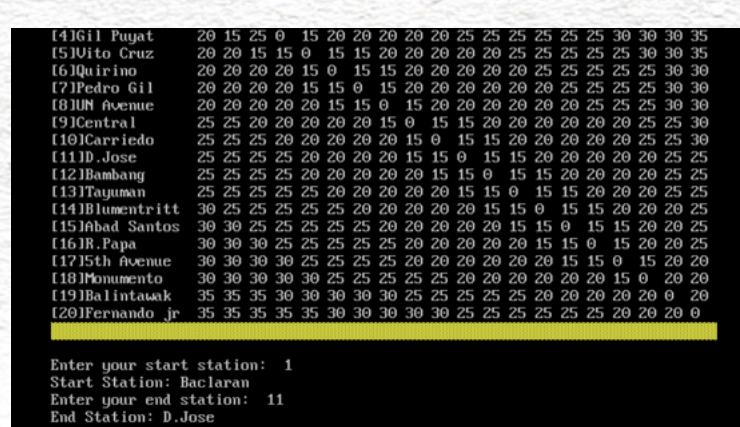

Choose this option to estimate the fare for your entire roundtrip. The program will guide you through the process, considering the start and end stations for both legs.

5. SPECIAL CASES

5.1 Connection to Another Train

If your end station connects to another train, the program will ask if you want to proceed in the current train or switch to another. Check the manual cover for the map of the entire LRT-MRT STATION.

3. GETTING STARTED

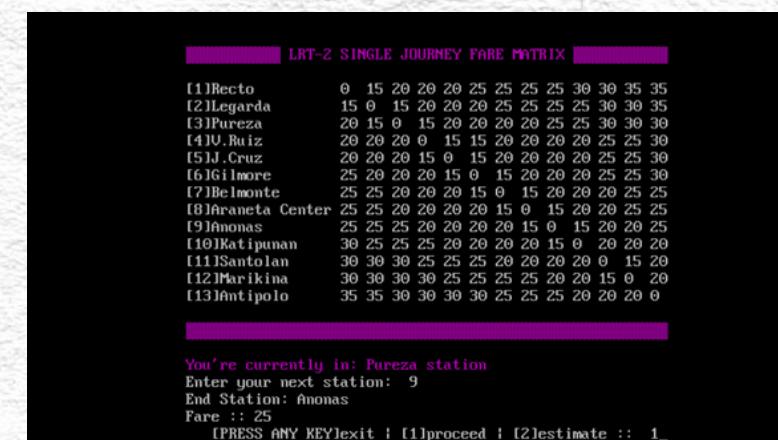

3.1 Train Type Selection.

When you run the program, it will prompt you to select a train type: LRT-1, LRT-2, or LRT-3. Enter the corresponding number (1, 2, or 3) for the desired train type.

3.2 Start and End Station Input.

After selecting the train type, the program will prompt you to enter your start and end station. Follow the on-screen instructions to input the station codes.

3.3 Displaying Fare and Station Names.

Once the start and end stations are entered, the program will display the fare for the selected journey and the name of selected stations.

6. Estimating Roundtrip Fare

Estimating Roundtrip Fare

If you choose to estimate the fare for the entire roundtrip, the program will guide you through entering the start and end stations for both legs of your journey.

The estimated fare for your trip is :: 45
[0]exit | [1]new trip :: 1

7. CONCLUSION

Congratulations! You've successfully used the TrainTrip Estimator program to estimate your train fare. Feel free to explore more options or exit the program as needed.
